

Chemistry *Fundamentals*

10 Things you need to know to be successful in **General Chemistry** and beyond...

1 Show up - Don't miss class! It's a simple formula for your success.

2 For every hour you are in class expect to spend at least an equal amount of time out of class studying the material

3 Take effective notes and review them before and after class to fill in gaps and figure out what you need to ask questions about

4 Utilize the Chemistry Tutorial Center or ask about a private tutor in the General Chemistry Office or Student Success Center

5 Be an active learner & participate in class!

6 Don't be afraid to approach your professors, they are human and they can help!

7 Manage your time in and out of class and set priorities according to the goals you wish to reach

8 Do the work - read the textbook, work suggested problems, complete homework on time

9 When in doubt, ask a question!

10 Don't get behind - getting behind will double your workload
